COMPLETE THE STN SURVEY - APRIL 27 THROUGH MAY 31

Dear valued STN customer,

In an effort to enhance your experience with STN, we would

like to better understand what you find useful. Please take approximately 5 minutes to complete a web survey.

If you provide us with your name, login ID, and e-mail address, you will be entered in a drawing to win a free iPod(R). Your responses will be kept confidential and will help us make future improvements to STN.

Take survey: <http://www.zoomerang.com/survey.zgi?p=WEB2259HNKWTUW>

Thank you in advance for your participation.

L1 ANSWER 1 OF 108 CAPLUS COPYRIGHT 2006 ACS on STN
 ACCESSION NUMBER: 2006:244523 CAPLUS
 ENTRY DATE: Entered STN: 17 Mar 2006
 TITLE: Palladium mediated ring opening of tetrahydrofuran (THF) by amines
 AUTHOR(S): Thomas, Stacey; Russell, Henry F.; Bushelle-Edghill, Jennifer; Lewis, Melissa R.
 CORPORATE SOURCE: Science & Mathematics, Johnson C. Smith University, Charlotte, NC, 28216, USA
 SOURCE: Abstracts of Papers, 231st ACS National Meeting, Atlanta, GA, United States, March 26-30, 2006 (2006), CHED-452. American Chemical Society: Washington, D. C.
 CODEN: 69HYEC
 DOCUMENT TYPE: Conference; Meeting Abstract; (computer optical disk)
 LANGUAGE: English
 ABSTRACT:
 The isolation of an N-substituted 4-amino-1-butanol as a byproduct of the palladium catalyzed hydrogenation of N-(2-nitrobenzyl)benzimidazole prompted further investigation into the general applicability of this reaction. Derivs. of 4-amino-1-butanols are T-type calcium channel antagonists which exhibit anti-proliferative activity against a variety of **cancer** cells. Tests have also shown that the p-aminobenzoate of 4 diethylamino-1-butanol is a more effective anesthetic than **cocaine**. A standard suspension of amine/THF solution containing Pd/C catalyst is exposed to hydrogen at atmospheric pressure and the reaction monitored by thin layer chromatog. (TLC). The products are characterized by NMR and elemental anal. Preparation of the aminobutanols has shown varying reaction times and results show that only primary aromatic amines react. A radical based mechanism is indicated since it appears that THF hydroperoxide is necessary for reaction. Future work with other amines is anticipated to more definitively characterize the reaction.

reaction monitored by thin layer chromatog. (TLC). The products are characterized by NMR and elemental anal. Preparation of the aminobutanols has shown varying reaction times and results show that only primary aromatic amines react. A radical based mechanism is indicated since it appears that THF hydroperoxide is necessary for reaction. Future work with other amines is anticipated to more definitively characterize the reaction.

ABSTRACT:

The actions of retroviral infections, aging, and **cocaine** and morphine injection on cytokine production were investigated in C57BL/6 female mice. Retroviral infection with LP-BM5 murine leukemia virus was further developed as a model of murine acquired immunodeficiency syndrome (AIDS). The effects of ***cocaine*** and morphine on gamma-interferon (IFN) and **tumor** necrosis factor (TNF) production in vivo and with isolated spleen cells were measured by a sandwich ELISA method. Serum IFN was generally not detected in any group except mice injected with saline and young mice infected with LP-BM5 virus. Splenocytes from mice with murine AIDS produced less IFN when stimulated in vitro by ConA. In aged mice, IFN production by spleen cells was severely suppressed by retroviral infection. **Cocaine** had a tendency to suppress IFN production by stimulated cells in vitro. Morphine tended to reduce IFN production by spleen cells from retrovirally infected animals. The serum TNF level in mice with murine AIDS was elevated creating higher levels in morphine and morphine plus **cocaine** treated uninfected mice while ***cocaine*** injection eliminated serum TNF. When stimulated in vitro by lipopolysaccharides (LPS), splenocytes from mice with murine AIDS also produced more TNF than uninfected controls. TNF production in vitro and in vivo was significantly increased by retroviral infection. Therefore, results indicate that **cocaine** and retroviral infection modulate TNF and IFN production

SUPPL. TERM: AIDS cytokine aging cocaine morphine retrovirus
INDEX TERM: Immunodeficiency
(acquired immune deficiency syndrome, murine, aging and
cocaine and morphine and retroviral infection effect on
cytokine formation in)
INDEX TERM: Senescence
(elderly, cytokine formation response to cocaine and
morphine and, in murine AIDS model)
INDEX TERM: Pharmaceuticals
(of abuse, cytokine formation response to aging and, in
murine AIDS model)
INDEX TERM: Virus, animal
(retro-, infection with, cytokine formation response to
aging and cocaine and morphine and, in murine AIDS model)
INDEX TERM: Lymphokines and Cytokines
ROLE: FORM (Formation, nonpreparative)
(tumor necrosis factor, formation of, aging and
cocaine and morphine effect on, in murine AIDS
model)
INDEX TERM: Interferons
ROLE: FORM (Formation, nonpreparative)
(γ , formation of, aging and cocaine and morphine
effect on, in murine AIDS model)
INDEX TERM: 50-36-2, Cocaine 57-27-2, biological studies
ROLE: BIOL (Biological study)
(cytokine formation response to aging and, in murine AIDS
model)
